MySTD

Minimum duration of the license agreement: **36 months payable annually**
Collections of 20, 60, 100, 200, 300, 500, 1000, 2500, 5000 standards or **complete collection**
Choice of subscription: **national, European or international**

You have more than 40,000 European standards except the standards in the EN50xxx and EN60xxx series.

You create the collection of European standards for your company.
Standards translated into 2, 3 or 4 languages count as one document.

You select the standards of your choice within the limit of your collection (20, 60 or 100 standards, etc.) and at any time, you will be possible to expand your collection.

The users of your company download the selected standards from MySTD. And that without supplement.

Benefits of MySTD

User-friendly and easy to manage, MySTD offers many advantages:

1. The documents are available for consultation, download and print 24/7.
2. Automatic update: The system automatically updates the standards of your collection, and this in all languages available (French, English, German and Dutch). As soon as an amendment, translation or new edition, (or a complete replacement) appears, you receive a warning.
Each user has the possibility of adding any standard of their national, European or international order exclusively from the MySTD platform in electronic version. These purchased documents (without update) are accessible for the applicant.
3. Reduced costs: Your subscription takes care of the optimal management of your collection, which reduces your administrative work.
4. Simple: one click is enough to get a complete overview of your collection of standards and its history. You can add users, browse the catalog of standards and add the standards you need.
5. Centralized management: Your collection of standards is centralized so centralized so that all users consult the same version of the document .
