Introduction xv

CHAPTER 1

Why Aircraft Thermal Management Matters 1

1.1 Introduction 1

1.2 Temperature Requirements 1

1.3 Removing Heat 2

1.4 Protection 2

1.5 Increased Importance 3

1.5.1 Composite Materials 3

1.5.1.1 Advantages over Metals 3

1.5.1.2 Disadvantages of Using Composites 6

1.5.2 Higher Heat Loads 7

1.5.3 More Electric Aircraft 7

1.5.3.1 No-Bleed Systems 7

1.5.3.2 Electric Actuators 8

1.5.3.3 Challenges 8

References 9

CHAPTER 2

Temperature and Thermal-Related Requirements 11

2.1 Introduction 11

2.2 Outside Ambient Conditions 12

2.2.1 Climate and Aircraft Performance 12

2.2.1.1 Standard Day 13

2.2.1.2 Environmental Envelope 13

2.2.1.3 Safe Operations 14

2.2.1.4 Performance 14

2.2.1.5 Operational Requirements and Limits 14

2.2.1.6 OAT and Airplane Performance 15

2.2.1.7 MIL-HDBK-310 16

2.2.2 Boundary Temperature Calculations	19
2.2.2.1 Ground	19
2.2.2.2 Sky	21
2.2.2.3 Ram Air	22
2.2.3 Boundary Pressure Calculations	23
2.2.3.1 Pounds Mass versus Pounds Force	23
2.2.3.2 Total (Ram) Pressure	24
2.2.4 Humidity	25
2.2.5 Solar Flux	25
2.2.6 Wind Speed	25
2.3 Pressurized Volume	25
2.3.1 Passenger Cabin and Flight Deck (Thermal Comfort)	26
2.3.1.1 Thermal Comfort Parameters	26
2.3.1.2 Thermal Load	29
2.3.1.3 Predicted Mean Vote	30
2.3.1.4 Predicted Percentage Dissatisfied	30
2.3.2 Cargo Compartments	30
2.3.3 Equipment	31
2.4 Unpressurized Area	32
2.4.1 Fuel	33
2.4.2 Hydraulics	34
2.5 Structure	34
2.5.1 External Bulk	35
2.5.2 Internal	35
References	35

CHAPTER 3

Airplane-Generated Heat Sources	39
3.1 Introduction	39
3.2 Occupants	39
3.2.1 Sensible Heat	40
3.2.2 Latent Heat	40
3.2.3 Passengers and Crew	40
3.2.4 Live Animal Cargo	40
3.2.5 Avionics and Electrical Equipment	42
3.3 Flight Controls and Hydraulic Systems	43
3.3.1 Hydraulic	44
3.3.2 Electric	44
3.3.3 Flight Control Thermal Impact	44

3.4 Lights	<u>45</u>
3.5 Power Feeders	<u>45</u>
3.5.1 Electromagnetic Interference	<u>46</u>
3.5.2 Inductive Loads	<u>46</u>
3.6 Brakes	<u>46</u>
3.6.1 Brake Heat Sink	<u>47</u>
3.6.2 Brake Temperatures	<u>47</u>
3.6.3 Brake Heating during Successive Missions	<u>48</u>
3.6.4 MLG Wheel Well	<u>49</u>
3.6.5 BTMS Selection at Gate Release	<u>49</u>
3.6.6 Brake Fans	<u>49</u>
3.6.7 Thrust Reverses	<u>49</u>
3.6.8 Fuse Plugs	<u>50</u>
3.7 Environmental Control System	<u>50</u>
3.7.1 Air Supply	<u>50</u>
3.7.2 Packs	<u>51</u>
3.7.3 Fans	<u>51</u>
3.7.4 Anti-icing/Deicing Systems	<u>52</u>
References	<u>52</u>

CHAPTER 4

External Heat Sources	<u>53</u>
4.1 Introduction	<u>53</u>
4.2 Solar Heating	<u>53</u>
4.2.1 The Sun	<u>54</u>
4.2.2 Incident Solar Load	<u>55</u>
4.2.3 Time of Day and Surface Orientation	<u>55</u>
4.2.4 Solar Absorptance and Reflectance	<u>56</u>
4.2.5 Transmittance	<u>57</u>
4.2.6 Modeling Terrestrial Radiation	<u>58</u>
4.2.6.1 Extraterrestrial Radiation	<u>58</u>
4.2.6.2 Declination Angle	<u>58</u>
4.2.6.3 Solar Time	<u>59</u>
4.2.6.4 Zenith Angle	<u>60</u>
4.2.6.5 Altitude or Elevation Angle	<u>60</u>
4.2.6.6 Air Mass Model	<u>60</u>
4.2.6.7 Clear Sky Model	<u>61</u>
4.3 Aerodynamic Heating	<u>62</u>
4.3.1 Subsonic Flight	<u>62</u>
4.3.2 Supersonic Flight	<u>62</u>

4.4 Lightning	<u>63</u>
References	<u>64</u>

CHAPTER 5

Aircraft Heat Sinks	<u>67</u>
5.1 Introduction	<u>67</u>
5.2 Ambient Air	<u>67</u>
5.2.1 Structure and Unpressurized Ambient Cooling	<u>68</u>
5.2.2 Systems Cooling	<u>68</u>
5.2.2.1 Ram-Air Systems	<u>68</u>
5.2.2.2 Skin Heat Exchangers	<u>69</u>
5.2.2.3 Cabin Exhaust	<u>69</u>
5.3 Sky	<u>69</u>
5.4 Fuel	<u>69</u>
5.4.1 Thermal Capacitance	<u>70</u>
5.4.2 Fuel Supply Line and Energy Recovery	<u>70</u>
Reference	<u>70</u>

CHAPTER 6

Fires and Failures	<u>71</u>
6.1 Introduction	<u>71</u>
6.2 Fires	<u>72</u>
6.2.1 MLG Wheel Well	<u>72</u>
6.2.2 Engine and APU	<u>73</u>
6.2.3 Cargo Compartment	<u>74</u>
6.2.3.1 Class A	<u>74</u>
6.2.3.2 Class B	<u>74</u>
6.2.3.3 Class C	<u>74</u>
6.2.3.4 Class E	<u>75</u>
6.2.3.5 Class F	<u>75</u>
6.2.3.6 Cargo Liners	<u>75</u>
6.2.4 Passenger and Crew Area	<u>75</u>
6.2.4.1 Prevention	<u>76</u>
6.2.4.2 Fire Detection	<u>76</u>
6.2.4.3 Fire Suppression	<u>76</u>
6.2.5 Electrical/Electronic Bay and Lower Lobe	<u>76</u>
6.2.5.1 787 Lithium-Ion Battery Fires	<u>76</u>
6.2.5.2 Why Lithium Ion?	<u>78</u>

6.2.6 Fuel Tank Fires	<u>78</u>
6.2.7 External Fuel Fire	<u>79</u>
6.3 System Failures	<u>79</u>
6.3.1 Burst Ducts	<u>79</u>
6.3.2 Leaking Ducts	<u>80</u>
References	<u>80</u>

CHAPTER 7

Environmental Control Systems	<u>81</u>
7.1 Introduction	<u>81</u>
7.2 Cabin Temperature and Pressure Control	<u>81</u>
7.2.1 Air Supply (1 to 2)	<u>82</u>
7.2.1.1 No-Bleed System	<u>84</u>
7.2.1.2 Ground-Based Operation	<u>85</u>
7.2.2 Air Conditioning (3)	<u>85</u>
7.2.2.1 Air Cycle Machine	<u>85</u>
7.2.2.2 Vapor Cycle Machine	<u>88</u>
7.2.2.3 Air Cycle versus Vapor Cycle Machine	<u>89</u>
7.2.3 Air Distribution (4-8)	<u>90</u>
7.2.3.1 Recirculation System	<u>90</u>
7.2.3.2 Main Cabin	<u>91</u>
7.2.3.3 Fight Deck	<u>92</u>
7.2.4 Cargo Heat and Cargo Air Conditioning	<u>92</u>
7.2.5 Cabin Pressure Control	<u>93</u>
7.3 Venting and Chiller Exhaust	<u>93</u>
7.4 EE Cooling	<u>94</u>
7.4.1 Active Cooling	<u>95</u>
7.4.2 Passive Cooling	<u>95</u>
7.4.3 Flight Critical Equipment	<u>96</u>
7.5 Protective Systems	<u>96</u>
7.5.1 Wing Anti-ice	<u>97</u>
7.5.1.1 Thermal	<u>98</u>
7.5.1.2 Chemical	<u>98</u>
7.5.1.3 Mechanical	<u>98</u>
7.5.2 Engine Anti-ice	<u>99</u>
7.5.3 Ice Detection	<u>99</u>
7.5.4 Air Data Sensors	<u>99</u>
7.5.5 Windshields	<u>100</u>
References	<u>100</u>

CHAPTER 8

Thermal Design	<u>103</u>
8.1 Introduction	<u>103</u>
8.2 Insulation Types	<u>103</u>
8.2.1 Fiberglass	<u>104</u>
8.2.2 Open Cell Foams	<u>105</u>
8.2.2.1 Polyimide	<u>105</u>
8.2.2.2 Melamine	<u>105</u>
8.2.3 Closed Cell Foams	<u>106</u>
8.2.4 Ceramics	<u>106</u>
8.2.5 Felt	<u>106</u>
8.2.6 Aerogels	<u>106</u>
8.3 Insulation Applications	<u>107</u>
8.3.1 Fuselage	<u>107</u>
8.3.2 Ducting and Hot Pack Components	<u>107</u>
8.3.3 Engine and Auxiliary Power Unit (APU)	<u>108</u>
8.3.4 Cargo Compartments	<u>108</u>
8.3.5 Insulation Placement: Heat Source or Receiver	<u>108</u>
8.4 Surface Coatings and Applications	<u>108</u>
8.4.1 Low Solar Absorptivity Paints	<u>109</u>
8.4.2 Low Emissivity Coatings	<u>109</u>
8.5 Radiation Shields	<u>110</u>
8.6 Phase-Change Materials	<u>110</u>
8.7 Intumescent Paints	<u>110</u>
8.8 Ablation Materials	<u>110</u>
8.9 Increase Heat Sink	<u>110</u>
8.9.1 Ram Air	<u>111</u>
8.9.2 Fuel	<u>111</u>
8.9.2.1 Fuel Flammability	<u>111</u>
8.9.2.2 Nitrogen-Generating Systems	<u>112</u>
8.9.2.3 Systems Cooling	<u>112</u>
8.9.2.4 Increasing Ambient Cooling	<u>112</u>
8.10 Reduce Heat Generation	<u>112</u>
8.11 Spot Cooling	<u>113</u>
8.11.1 Unpressurized Air	<u>113</u>
8.11.2 Pressurized Air	<u>113</u>
8.12 Modify Material	<u>113</u>
References	<u>114</u>

10.4 Multi-domain/Co-simulation	<u>141</u>
10.5 Computational Fluid Dynamics	<u>142</u>
10.5.1 External Flows	<u>142</u>
10.5.2 Internal Flows	<u>142</u>
10.5.3 Advantages and Limitations	<u>142</u>
10.5.4 Expanded Use	<u>143</u>
10.6 Pre-processing	<u>143</u>
10.7 Post-processing	<u>144</u>
10.8 General Programming Environments	<u>144</u>
10.9 Tool Source	<u>145</u>
10.9.1 In-house	<u>145</u>
10.9.2 In-house versus COTS Software	<u>145</u>
10.9.3 Open Source	<u>145</u>
10.9.4 Government	<u>146</u>
10.10 Software Evaluation and Selection	<u>146</u>
References	<u>147</u>

CHAPTER 11

Testing	<u>149</u>
11.1 Introduction	<u>149</u>
11.2 Identifying the Need	<u>149</u>
11.2.1 Analytical Uncertainty and Design Margins	<u>150</u>
11.2.2 Certification Requirements	<u>150</u>
11.2.3 System Criticality	<u>151</u>
11.3 Material Thermal and Surface Optical Properties	<u>151</u>
11.3.1 Thermal Conductivity	<u>151</u>
11.3.1.1 Guarded Hot Plate	<u>151</u>
11.3.1.2 Comparative Cut-Bar Method	<u>152</u>
11.3.1.3 Composite Materials	<u>152</u>
11.3.2 Specific Heat	<u>152</u>
11.3.3 Infrared Emissivity and Reflectivity	<u>152</u>
11.3.4 Solar Absorptance and Reflectance	<u>153</u>
11.3.5 In-Service Degradation of Properties	<u>153</u>
11.3.5.1 Materials	<u>153</u>
11.3.5.2 Surfaces	<u>153</u>

11.4	FAA Fire Testing	<u>153</u>
11.4.1	Materials	<u>153</u>
11.4.1.1	FAA Fire Test Handbook	<u>153</u>
11.4.1.2	Burn Resistance	<u>154</u>
11.4.1.3	Burnthrough	<u>154</u>
11.4.2	Systems	<u>155</u>
11.4.2.1	Cargo	<u>155</u>
11.4.2.2	Heat Generation	<u>156</u>
11.5	Model Validation	<u>156</u>
11.5.1	Temperatures	<u>156</u>
11.5.1.1	Thermometers	<u>156</u>
11.5.1.2	Probes	<u>156</u>
11.5.2	Fluid Flow and Pressure Drops	<u>157</u>
11.5.2.1	Pitot Tube	<u>157</u>
11.5.2.2	Manometers	<u>158</u>
11.5.2.3	Mechanical Pressure Gauges	<u>158</u>
