List of Acronyms xix

CHAPTER 1

## Introduction 1

A "Map" of the Book 1
What Are Assets? 2
Why Worry about Asset Management? 3
What Do We Need to Know about Our Assets? 3
How Do We Find Out What Is Happening? 3
What Is the Business Benefit? 4
Who Is in the Best Position to Carry Out Asset Management? 4
What Is Servitization? 5
Summary of the Book 5
References 7
Websites 7

CHAPTER 2

## The Business Imperative 9

Introduction 9
Companies that Have Embraced Servitization 12
Problems and Issues with Making Services a Separate Business Unit 16
The Importance of Human Factors 17
Strategy 18
Financial Evaluation and Modelling 19
The Value of In-Service Monitoring of Assets 20
Life Cycle Costing 23
Process Chain Network Analysis 25
Books and Papers 25
Consultant Papers 26
Cambridge Service Alliance 28

©2019 SAE International

Aston Business School 33
Other UK Universities 35
Universities Outside the United Kingdom 37
References 38
Websites 56
Additional Material 58
References 58
Websites 62

CHAPTER 3
Modelling and Simulation 63

Introduction 63
Why Is Modelling and Simulation Useful? 63
Levels of Modelling 64
Simulation 65
Books and Papers 67
Some Useful Sources of Information for Specific Disciplines and Equipment Types 67
General Mathematical Modelling 68
Modelling Tools 68
Reference Material 69
Aerodynamics, Fluid Mechanics, and Turbomachinery 69
Thermodynamics 70
Control Systems 70
Electrical Systems and Batteries 70
Heating, Ventilation, and Air Conditioning (HVAC) 70
Aeroengines and Gas Turbines 71
Aircraft 71
Automotive 72
Diesels and Turbocharging 72
Railways 73
Ships 73
Combined Heat and Power (CHP) 73
Fuel Cells 73
Pumps 74
Wind Turbines, Solar, and Renewable Energy 74
References 75
Websites 83
Additional Material 84
References 84
Websites 85

CHAPTER 4

Analysis 87

Introduction 87
Facets of Analysis 87
Difficulties with the Analysis Process 88
The "Traditional" Approach to Analysis 88
Iterative Analysis 89
An Alternative Approach to Analysis 91
Optimal Estimation and Kalman Filtering 93
The Kalman Filter Equations 94
Problems with the Kalman Filter 95
Books and Papers 95
References 96
Websites 98
Additional Material 98
Reference 98

CHAPTER 5

Observability 99

Introduction 99
Setting Up an Analysis 99
Generation of Exchange Rate Tables 100
Correlations Between Measurements 101
Inclusion of Sensor Bias 103
Correlations Between Component Performance Parameter Changes and/or Sensor Biases 104
References 107

CHAPTER 6

Time Series Analysis 109

Introduction 109
Time Series Basics 109
Moving Average 111
Exponential Smoothing 112
Kalman Filtering 113
The Optimal Tracker 114
Improving the Optimal Tracker 115
Books and Papers 116

References 117
Additional Material 118
References 118
Website 118

CHAPTER 7
Data Visualization 119

Introduction 119
Fundamental Information Requirements 119
Typical Information Solutions 120
Typical Information Building Blocks 120
Alerts 121
Bar and Column Charts 121
Dashboards 123
Data Export Capabilities 123
Fault/Event Cubes 123
Mapping 123
Parallel Coordinates Plots 129
Reporting 129
"Smart" Analytics 129
Summary Statistics 130
Time Series 130
User-Defined Calculations 132
Weighted Lists 132
X-Y Plots 132
Drill-Down 133
Business Intelligence 133
Books and Papers 134
References 135
Websites 137
Additional Material 138
References 138
Websites 138

CHAPTER 8
More Complex Techniques 139

Introduction 139
Statistics 140
Data Science 142
Bayesian Statistics 143

R and Microsoft Excel® 144
Principal Component Analysis 145
Artificial Intelligence 145
Fuzzy Logic 147
Neural Networks 147
Case-Based Reasoning 147
KEEL® 147
Pattern Matching 148
Prognostics 149
Data Mining 150
Machine Learning 150
References 151
Websites 158
Additional Material 159
References 159
Websites 161

CHAPTER 9
Data Gathering and Software Architectures 163

Introduction 163
Software Schematics 163
Data Gathering 165
Books and Papers 167
Machine to Machine (M2M) 167
The Industrial Internet and the IoT 168
Knowledge Management 169
Data Historians 170
Big Data 171
References 173
Websites 180
Additional Material 181
References 181
Websites 184

CHAPTER 10
The Practicalities 185

Introduction 185
Reliability 186
Fault Trees, FMEA, FMECA, and FRACAS 188

Alarms 189
Maintenance 190
Spare Parts Management 195
Computerized Maintenance Management Systems (CMMS) 196
Availability 197
Condition Monitoring Techniques 197
Field Service 204
References 204
Websites 221
Additional Material 223
References 223
Websites 225

CHAPTER 11
Standards and Procedures 227

Introduction 227
Asset Management 227
Books and Papers 232
Condition Monitoring 235
An Observation 235
References 237
Websites 243
Additional Material 243
References 243
Websites 244

CHAPTER 12
Summary and Conclusions 245

Summary 245
Servitization and Asset Management: Nine Key Points 246
Conclusions 247
References 251
Websites 251
Additional Material 251
References 251

Appendix A: Simplified Servitization Example 253

Appendix B: Power System Example 255

Introduction 255
The Scenario 255
Fuel Cell and Wind Turbine Modelling 257
Simulation Outputs 258
Analysis of Simulated Power System Data 265
Conventional Analysis 265
Iterative Analysis 265
Kalman Filtering 268
Time Series Visualization 269
The Optimal Tracker 270
Linear Regression 272
Statistics 272
Parallel Coordinates Plot 273
Pattern Matching 273
Neural Networks 273
Decision Trees 275
K Nearest Neighbors 277
Unsupervised Cluster Analysis 279
Support Vector Machines 280
A Final Thought 280
References 282
Websites 283

Looking after Planes, Trains, Clean Energy, and Human Health: 23 Important Lessons Learned the Hard Way 285

Examples and Stories 290
Conclusions 291
References 292

About the Author 293
