

Contents

Foreword	<u>xi</u>
Preface	<u>xiii</u>

CHAPTER 1

Introduction and History of Connected and Automated Vehicles	<u>1</u>
CAV History and Origins	<u>4</u>
CAVs Today	<u>12</u>
Current Status	<u>18</u>
Societal Impacts	<u>20</u>
Positive Impacts	<u>21</u>
Negative Impacts	<u>22</u>
CAV Taxonomy and Definitions	<u>23</u>
Scope of the Book	<u>26</u>
References	<u>27</u>

CHAPTER 2

Localization	<u>31</u>
Localization Need	<u>32</u>
Mapping	<u>33</u>
Sensing	<u>34</u>
Localization Challenges	<u>37</u>
Localization Techniques	<u>39</u>
References	<u>43</u>

CHAPTER 3

Connectivity	<u>45</u>
Connectivity Defined	<u>46</u>
Connectivity Origins	<u>50</u>
Motivations: The Case for Connectivity	<u>53</u>
Motivations: Crash Avoidance	<u>53</u>
Motivations: Mobility Enhancement	<u>55</u>
Motivations: Environmental Impact	<u>56</u>
Connectivity Case Study: ACC versus CACC	<u>58</u>
Connectivity Technology	<u>61</u>
Connectivity Technology: DSRC	<u>63</u>
Connectivity Technology: C-V2X	<u>64</u>
Connectivity Technology: DSRC versus 5G	<u>65</u>
Connectivity Technology: CV Costs	<u>66</u>
Deployment Challenges versus Potential Benefits	<u>66</u>
References	<u>68</u>

CHAPTER 4

Sensor and Actuator Hardware	<u>71</u>
Principles and Characteristics of Sensor Hardware	<u>71</u>
Cameras	<u>71</u>
Definition and Description	<u>71</u>
Characteristics and Capabilities	<u>73</u>
RADAR	<u>74</u>
Definition and Description	<u>74</u>
Characteristics and Capabilities	<u>75</u>
LIDAR	<u>77</u>
Definition and Description	<u>77</u>
Working Principles	<u>78</u>
Types of LIDAR	<u>79</u>
Characteristics	<u>80</u>
Ultrasonic SONAR	<u>81</u>
Definition and Description	<u>81</u>
Characteristics	<u>82</u>
Other Important Sensors and Measurement Sources	<u>83</u>
HD Maps	<u>83</u>
High-Precision GPS	<u>83</u>

Sensor Suites	<u>84</u>
Overview	<u>84</u>
Sensor Suite: Functionality	<u>85</u>
Actuation and Propulsion Hardware	<u>86</u>
Steer-By-Wire	<u>86</u>
Rear-Wheel Steering	<u>87</u>
Electric Propulsion and In-Wheel Motors	<u>88</u>
References	<u>89</u>

CHAPTER 5

Computer Vision	<u>91</u>
Image and 3D Point Cloud	<u>92</u>
Image Formation	<u>92</u>
Image Processing	<u>95</u>
3D Point Cloud Formation	<u>99</u>
Deep Learning	<u>101</u>
Deep Neural Networks	<u>103</u>
Training Deep Neural Networks	<u>104</u>
Convolutional Neural Networks	<u>106</u>
Perception Tasks for CAV	<u>108</u>
Object Detection	<u>108</u>
Tracking	<u>110</u>
Segmentation	<u>112</u>
3D Depth Estimation	<u>113</u>
Perception System Development for CAV	<u>114</u>
Case Study: Google/Waymo CAV	<u>115</u>
Case Study: Tesla Autopilot	<u>116</u>
Case Study: CAROM	<u>117</u>
References	<u>119</u>

CHAPTER 6

Sensor Fusion	<u>121</u>
Sensor Fusion Definition and Requirements	<u>121</u>
Sensor Fusion Definition and CAV Data Sources	<u>122</u>
Sensor Fusion Requirements	<u>125</u>
Sensor Fusion Origins	<u>125</u>
JDL Model	<u>126</u>
Dasarathy Model	<u>128</u>
Boyd Control Loop	<u>129</u>

Intelligence Cycle	130
Omnibus Model	130
Object-Oriented Model	130
Frankel-Bedworth Architecture	130
Sensor Fusion Architecture	131
Centralized Fusion Architecture	132
Distributed Fusion Architecture	132
Hybrid Fusion Architecture	134
Sensor Interaction	135
Object and Situation Refinement Examples	137
Feature Extraction	137
Multi-Target Tracking	138
Evaluation Metrics	139
Sensor Fusion Applications: Active Safety Systems	141
Safe Speed and Distance	141
Lane-Keeping Assist	142
Intersection Navigation	142
Sensor Fusion Examples from Developmental CAVs	143
Waymo Sensor Fusion Applications	143
Lyft Self-Driving Platform with Level 5	144
Cruise Application of Late Fusion Techniques	144
Sensor Fusion Challenges	145
Lessons from Active Safety Systems and CAVs	145
Summary	147
References	147

CHAPTER 7

Path Planning and Motion Control	151
Definition and Hierarchy	151
Path Planning Objectives	153
Structured Environments	154
Deviations from Reference Paths	155
Unstructured Environments	156
Behavioral Decision-Making	157
Finite-State Machines	158
Probabilistic Methods	159
Learning-Based Methods	161
Behavioral Ethics	164

Moral Dilemmas	165
The Moral Machine Project	166
Regulatory Guidance	167
Trajectory Planning	168
Optimization-Based Methods	170
Graph Search and Sampling Methods	171
Motion Control	172
Kinematic Path Tracking	173
Trajectory Tracking	174
Model Predictive Control	175
Actuation and Actuator Delay	177
End-to-End Automated Driving	178
Summary and Outlook	179
References	180

CHAPTER 8

Verification and Validation	183
Definition	184
Design and Development Methods	186
Test and Validation Methods	187
Challenges	188
Test and Validation Methodology	191
Operational Safety Metrics	191
Test Methods	195
Simulation Testing	195
Closed Course Testing	198
Public Road Testing	200
Evaluation Methods	203
Evaluation Criteria	205
Safety Case	206
References	211

CHAPTER 9

Outlook	217
State of the Industry—Technology	218
State of the Industry—Deployments	220

State of the Industry—Regulation and Legislation	<u>223</u>
State Legislation and Regulation	<u>226</u>
Standards Activities	<u>227</u>
Public Perception	<u>227</u>
CAV-Related Research and Activities	<u>229</u>
Advanced Vehicle Tracking through Infrastructure—IAM and ASU	<u>230</u>
Deployment of Infrastructure-Based CAV Solutions—NAU and UofA	<u>230</u>
Scenario-Based Testing of CAVs—Mcity and UMTRI	<u>231</u>
CAV Interactions with Emergency Vehicles—VTTI	<u>232</u>
What’s Next?	<u>233</u>
Appendix A	<u>234</u>
References	<u>239</u>
Appendix B: Acronyms	<u>245</u>
About the Authors	<u>249</u>
Index	<u>253</u>
