

DIN EN 13603:2021-07 (English)

Copper and copper alloys - Test methods for assessing protective tin coatings on drawn round copper wire for electrical purposes

Contents		Page
European foreword		3
1	Scope	4
2	Normative references	4
3	Terms and definitions	4
4	Thickness of the unalloyed tin coating	5
4.1	General	5
4.2	Principle of the method based on the electrolytic dissolution of the tin coating	5
4.2.1	General	5
4.2.2	Reagents and materials	5
4.2.3	Apparatus	5
4.2.4	Preparation of the test piece	7
4.2.5	Procedure for determining the thickness of unalloyed tin coatings	7
4.2.6	Expression of results	10
4.3	Principle of the method based on XRF	11
4.3.1	General	11
4.3.2	Devices with measuring spots larger than the wire diameter -- Overlap technique	11
4.3.3	Devices with measuring spots smaller than the wire diameter - Full-spot technique	12
4.3.4	Preparation of the test piece	12
4.3.5	Factors affecting the measuring accuracy	13
5	Continuity of the tin coating	17
5.1	Principle	17
5.2	Test solution	17
5.3	Reference solution	18
5.4	Preparation of the test piece	18
5.5	Cleaning of the test piece	18
5.6	Immersion for testing	18
5.7	Determination	19
5.7.1	General	19
5.7.2	Comparison by Nessler cylinders	19
5.7.3	Colorimetric method	19
6	Adherence of the tin coating	19
6.1	Principle	19
6.2	Stock solution	19
6.3	Test solution	19
6.4	Preparation of the test piece	19
6.5	Cleaning of the test piece	20
6.6	Immersion for testing	20
6.7	Examination	20
7	Test report	21
