Supersedes edition P 4
of June 2017
and will supersede EN 2002-001:2005

Descriptors:

ENGLISH VERSION

**Aerospace series
Metallic materials
Test methods
Part 001: Tensile testing at ambient temperature**

**Luft- und Raumfahrt
Metallische Werkstoffe
Prüfverfahren
Teil 001: Zugversuch bei Raumtemperatur**

**Série aérospatiale
Matériaux métalliques
Méthodes d'essais applicables
Partie 001 : Essais de traction à température ambiante**

This "Aerospace Series" Prestandard has been drawn up under the responsibility of ASD-STAN (The AeroSpace and Defence Industries Association of Europe - Standardization). It is published for the needs of the European Aerospace Industry. It has been technically approved by the experts of the concerned Domain following member comments.

Subsequent to the publication of this Prestandard, the technical content shall not be changed to an extent that interchangeability is affected, physically or functionally, without re-identification of the standard.

After examination and review by users and formal agreement of ASD-STAN, the ASD-STAN prEN will be submitted as a draft European Standard (prEN) to CEN (European Committee for Standardization) for formal vote and transformation to full European Standard (EN).

The CEN national members have then to implement the EN at national level by giving the EN the status of a national standard and by withdrawing any national standards conflicting with the EN.

ASD-STAN Technical Committee approves that: "This document is published by ASD-STAN for the needs of the European Aerospace Industry. The use of this standard is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

ASD-STAN reviews each standard and technical report at least every five years at which time it may be revised, reaffirmed, stabilized or cancelled. ASD-STAN invites you to send your written comments or any suggestions that may arise.

All rights reserved. No parts of this publication may be reproduced, stored in a retrieval system or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without prior written permission of ASD-STAN.

Contents	Page
Foreword	3
Introduction	4
1 Scope.....	5
2 Normative references.....	5
3 Terms, definitions and symbols.....	5
4 Health and safety.....	8
5 Principle of tensile testing.....	8
6 Testing requirements.....	8
6.1 Resources.....	8
6.1.1 Equipment/plant.....	8
6.1.2 Materials/reagents.....	9
6.1.3 Qualification of personnel	9
6.2 Test samples/test pieces.....	9
6.2.1 Shape and dimensions.....	9
6.2.2 Product Types	9
6.2.3 Preparation of test pieces	10
6.3 Testing procedure.....	10
6.3.1 Determination of the cross-sectional area	10
6.3.2 Marking the original gauge length (L_0)	11
6.3.3 Method of gripping	11
6.3.4 Extensometer	11
6.3.5 Temperature of test	11
6.3.6 Speed of testing.....	11
6.3.7 Young's modulus of elasticity (E), selection of test method.....	13
6.4 Determination and expression of test results	13
6.4.1 Determination of Young's modulus of elasticity (E)	13
6.4.2 Determination of proof stress (R_p).....	14
6.4.3 Determination of tensile strength (R_m).....	14
6.4.4 Determination of percentage elongation after fracture (A or A_{L0})	14
6.4.5 Determination of percentage reduction of area after fracture (Z)	15
7 Test report.....	15
Annex A (normative) Test pieces to be used for sheet and strip with thickness less than or equal to 8 mm	17
Annex B (normative) Non-machined test pieces to be used for bar, section and wire with a diameter or thickness less than or equal to 8 mm.....	19
Annex C (normative) Machined test pieces to be used for bars, sections, plates and wires with diameter or thickness greater than 8 mm and for forgings and castings.....	20
Annex D (normative) Test pieces to be used for tubes.....	23
Annex E (informative) Standard evolution form	25
