## Foreword

The main task of ASD-STAN is to prepare EN standards. In exceptional circumstances, however, the publication of a Technical Report of one of the following types may be proposed :

- type 1, the subject is still under technical development requiring wider exposure ;
- type 2, a Technical Committee has collected data of a different kind from that which is normally published as a European Standard.

The Non-metallic Material Domain decided to publish this document in the form of a Technical Report of type 2 in order to facilitate the updating of this document.
